

PROCESS FOR MAKING A GARMENT HAVING HANGING LEGS

ABSTRACT

A distinctive process for making a garment having a waist opening and a pair of hanging legs is disclosed. The process includes providing a first web and a second web and joining the first web and the second web to provide a crotch seam. Portions of the webs may also be removed to provide a crotch gap. The first web is drawn from the second web and at least a portion of the webs are slit to provide a garment chassis. Edges of the garment chassis may be fastened together to provide the garment.
